Tulsa, OK

(e-mail address)

This facility complies with the Best Management Practice (BMP) Program
for X-Ray and Photo Processors.

The following silver management system is utilized:

On-Site (silver reclaimer) **or** Off-Site (haul-away) **or** 100% Digital

Uses a Metallic Replacement Cartridge that filters silver out of the solution or Electrolytic Silver Recovery that uses electricity to draw the silver out of solution. The cartridges must be replaced regularly (we suggest yearly) or when test strips show a color change.

Employs a company to take away solution to have silver removed by a contractor.

Uses a computer to generate images without "wet" chemicals.
